

Accessories

-WSS -I use vilene type WSS for my designs. This WSS has 70gr / m2 it is a very solid and high quality WSS. Try to use the most similar type of WSS as I use. If you have a thin WSS - I recommend using two layers.

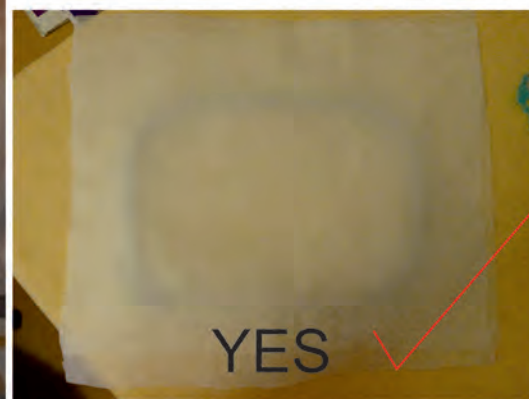

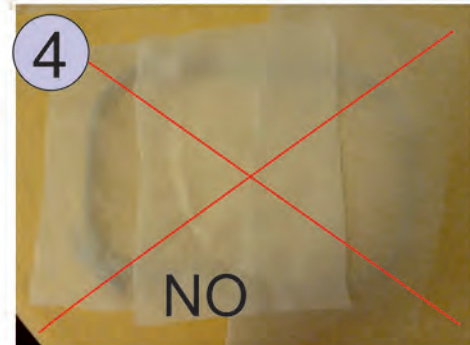

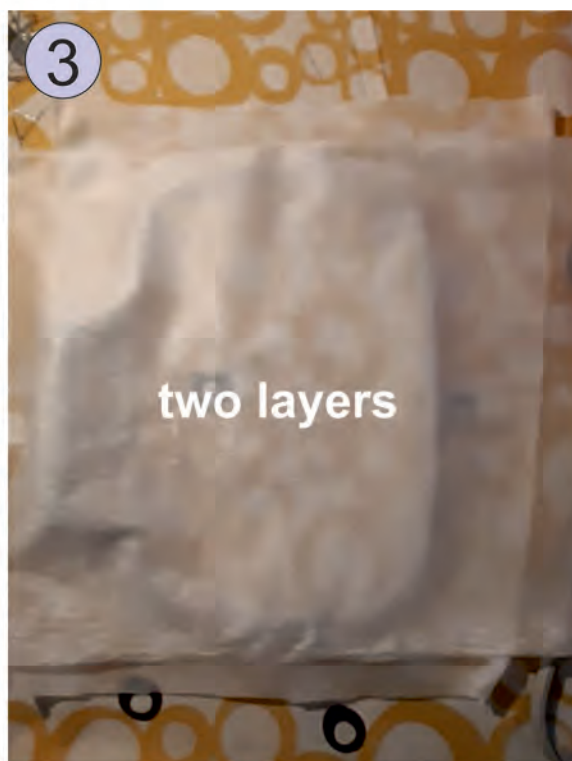

-pins

-scissors

-hoop

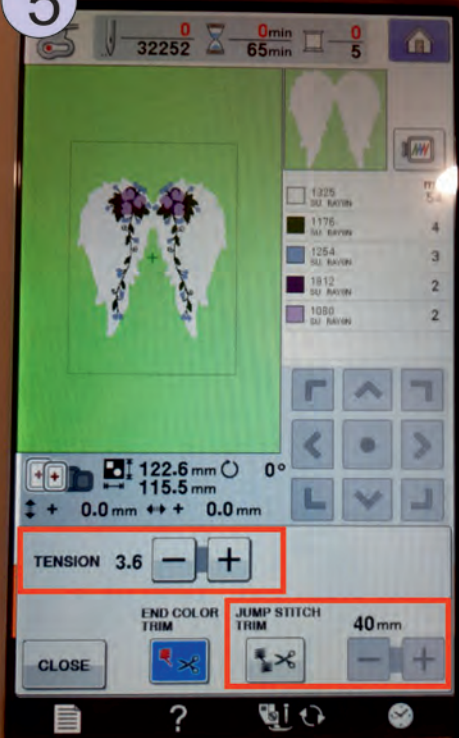

If the lace is to be double-sided, it is necessary to use the same color for the top and bottom thread.

I use one layer of WSS - but I have very good quality WSS. I use pins on the sides of the hoop to secure the WSS displacement. I use one layer of WSS - but I have very good quality WSS. I use pins on the sides of the hoop to secure the WSS displacement. If you do not have sufficient quality WSS, it is necessary to use two layers (one vertically and the other horizontally). It is necessary to attach both layers very well in the hoop - if both layers are not well attached, there will be a design problem. Also use pins to secure the WSS. I do not recommend embroidering multiple designs in one hoop - always use a given hoop size. The size of the hoop is always stated in the description on the website.

Do not use more pieces of WSS in the hoop as you see in the first picture - always use one piece.

I always adjust the thread tightening setting on my embroidery machine. It is necessary to know your machine and know how the machine tightens the thread. Excessive thread tightening is not good for lace. I also always set a longer „jump stitch trimm" for lace. I will reduce the speed to 600spm.

Now we put the part in lukewarm water. If we want to have a firm lace, we leave it in the water for only a short time. If we want to have soft lace (shoes, baby bonnet), leave it in the water for three hours and then put the parts in water with fabric softener and then rinse under running water.

9

After removing the WSS, wipe the part lightly in a towel and let it dry. After drying, it is necessary to iron - unless otherwise stated in the instructions.

My tips:

- I use a 75/11 organ needle.
- For most of my designs I use Gunold embroidery threads 40wt or Poly
- If you are a beginner in embroidering lace - I recommend starting to embroider simple designs such as hearts, Christmas decorations and then embroider more demanding designs. It is necessary to be very familiar with your embroidery machine, because each embroidery machine is different and has different settings.
- My designs are tested by three testers and I also test the design.
- Do not use high speed for embroidering lace.
- Embroidering lace is a pleasure and patience is required, because each lace contains a large number of stitches and it is not possible to embroider in a few minutes.

If you have any questions, feel free to send me an email or add a question to my FB group.
