Furball Instructions

SUPPLIES: (same for boy or girl stuffie)

Minky or similar faux fur fabric – 2 times the size of your hoop

Polyester stuffing – small amount

Batting (optional) for ears

Water soluble topping – 2 pieces the size of your hoop

Polyester 40wt embroidery thread – and a bobbin to match

80/12 sharp embroidery needle

NOTES: (for boy and girl stuffie)

I highly recommend minky (any type) or similar faux fur fabric. If you are using a heavy fur fabric you could have trouble with registration and broken needles.

Stuffie is done in one hooping. There will be a very small opening at the bottom between the feet to allow for stuffing and you will close with a few hand stitches when finished.

I recommend a cut away stabilizer. Tear away is not strong enough to stitch the fringed hair for the girl stuffie. The tear away just rips apart while stitching. I tested this.

For stuffing, you can use a dowel sharpened at one end to poke the stuffing into the opening...or a pencil

MS Furball stuffie has fringed hair. The hairband satin stitching at the end will hold the thread firmly in place after cutting the fringe.

MS Furball has a knockdown under the glasses and this should be done in the SAME color as your fur or other fabric.

BOY

1. Stitch the first color which is the placement stitch directly on the stabilizer. Cover this outline with your fabric. If you are using fur or fleece, you will need a layer of thin water soluble topping to prevent your foot getting caught in the nap.
2. Stitch color #2 which is the tack down for your fabric.
3. Stitch color #3-9 then STOP!
4. Add the small bit of batting on the back of the ear sections (optional) This will give the ears a bit of a puffy look.

5. Add your fabric on top of this to cover the entire outline on the back side of your hoop. This is the back of your stuffie. I used 505 spray and pins to hold the fur in place. I added a layer of wss topping on the back also. Stitch color #10 which is a tack down stitch outline then STOP!
6. Trim around the stuffie both front and back to remove as much fabric as possible so when you stitch the satin outline it will cover the edges and prevent your fabric from fraying. Do your trimming before you remove the wss topping; it is much easier to see your stitches which can be hidden in the fur fabric. After trimming you are ready for the final outline. This is the satin that holds your stuffie together #11. Make sure you **change your bobbin to match the top color thread.**
7. Remove the stabilizer and stuff Mr. Furball. Close up the small opening with a few hand stitches.

GIRL

1. Stitch the first color which is the placement stitch directly on the stabilizer. Cover this outline with your fur or fleece fabric and the wss topping. Stitch the next color which is a tackdown stitch. Continue stitching colors #3-11 then STOP!
2. Add the small bit of batting (optional) on the back under the ears. This will give the ears a soft and puffy look when finished but it is not essential. Add your fur or other fabric on top of the batting covering the entire outline on the back of your hoop. Cover that with the wss topping. Make sure to pin it all down well. I also used 505 spray with the pins.
3. Stitch color #12 which is a tack down outline stitch then STOP!
4. Trim around the stuffie both front and back to remove as much fabric as possible so when you stitch the satin outline it will cover the edges and prevent your fabric from fraying. Do your trimming before you remove the wss topping; it is much easier to see your stitches on top of the wss topping...which can be hidden in the fur fabric. After trimming you are ready for the final outline. This is the satin that holds your stuffie together #13.
5. **Change your bobbin to match the top thread**
6. The next colors #14,15,16 are the fringe for the hair and the final satin stitching for the top of the head which is the headband and a flower. These will hold the fringe securely in place after cutting.
7. For the fringed hair, cut the stitches on the back side of the hoop close to the satin headband. Do this before cutting away the stabilizer. After freeing up those stitches pull them all to the front. You can use tweezers or whatever you like to gently pull them through the stabilizer to the front side of the stuffie. This will be her hair. Now, cut away the rest of the stabilizer that was under the "hair".
8. Stuff and use a few hand stitches at the bottom to close the opening

9.
