APPLIQUE DESIGNS

Fabric: 5x7 (6x10)

Supplies:

- This was tested using woven cotton fabrics. We have read that Bokeh Woven fabrics have a tighter weave, creating a better barrier between you and dust.
- Designer used Cut Away Stabilizer, however, some testers used Med/heavy tear away stabilizer.
- We used Fold Over Elastic (FOE). *However*, this can also be used with ribbon, yarn, cut up T-Shirt materials, or creating a bias tape as a strap you can tie off.
- A sewing machine is required for the darts to be stitched

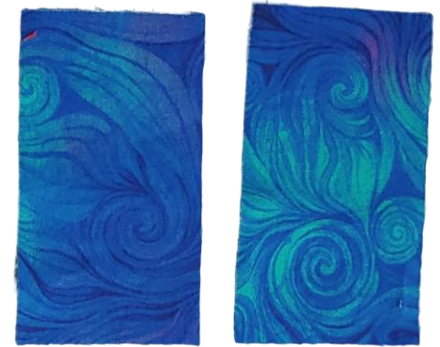

- Cut 1 Main Outer Fabric: 6x8 (7x11)
- Cut 2 Lining Fabric: 6x9 (7x12)
- Cut 2 Tabs: 4x2
- FOE: 20-23 inches

(20 fit my children, 23 fit me and my husband)

My FOE has a LOT of stretch! It is best to measure head to find how long to cut

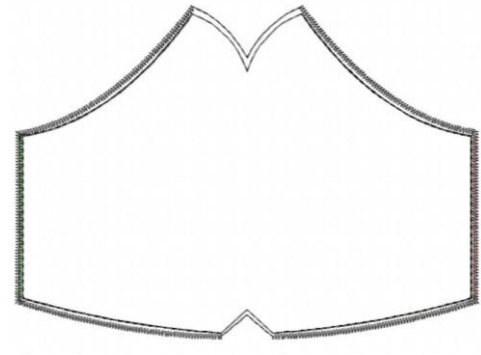

Cut (2) Tabs

*Fold over Elastic of Fabric
made into tieoffs*

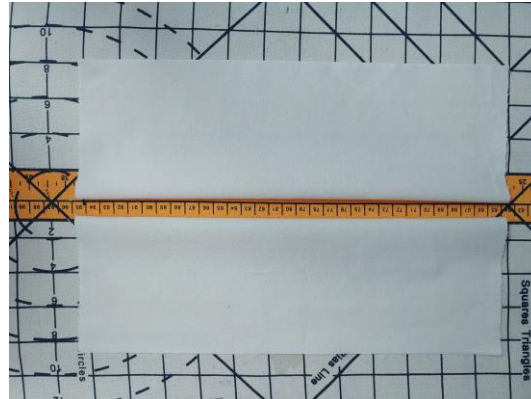

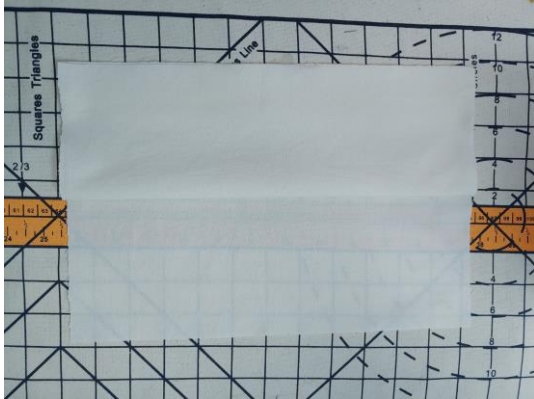

You can use many various items for the 'tie offs'
I prefer Fold Over Elastic for the snugest fit.

Step 1: Create Lining

Lining (inside fabric)

Take your lining fabric and fold in half the long way (hotdog style)

Iron / press . Set aside until step 4

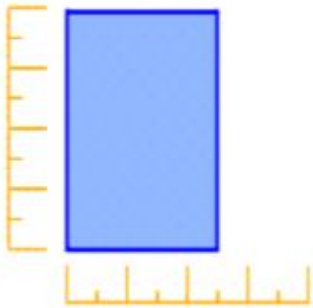

Step 2: Create Tabs

Side Tabs

Make Two

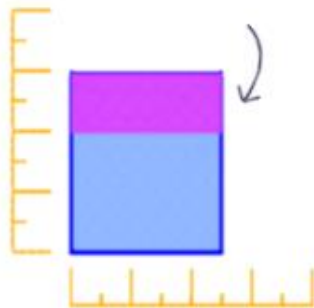

Short on elastic? Skip these and see next page for tie option!

4x2

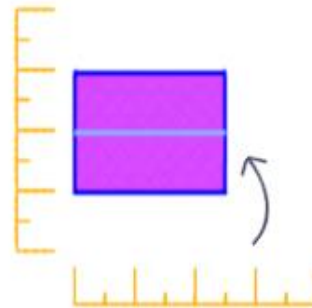

Start with a piece of fabric 4 inch by 2 inch

4x2

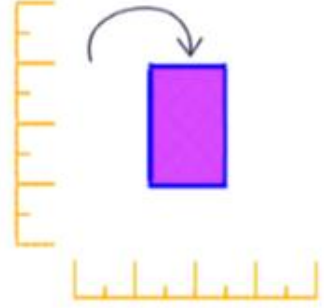

Fold top 1 inch down

4x2

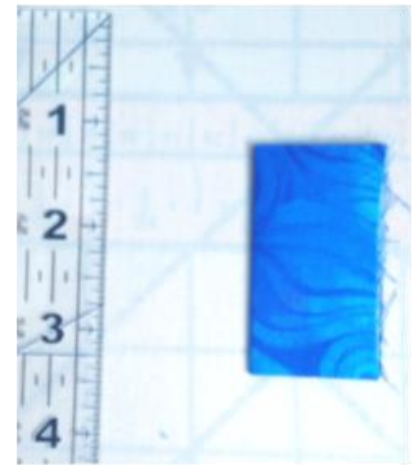

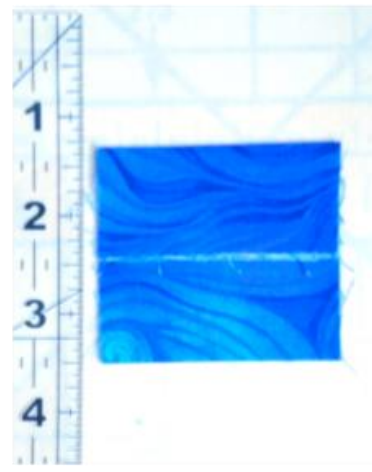

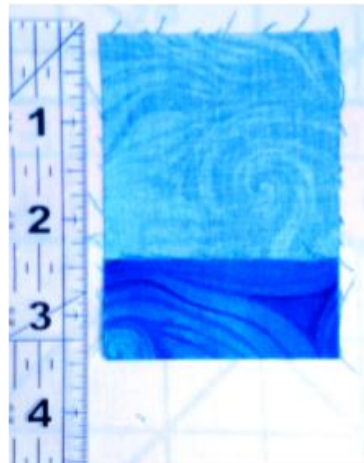

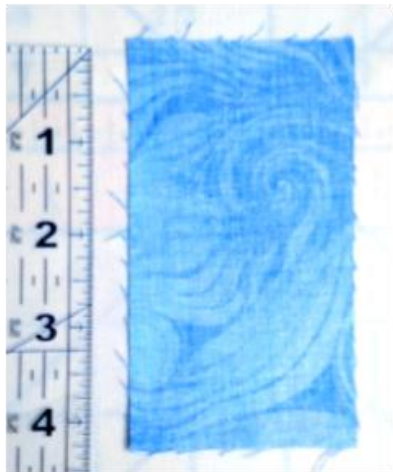

Fold bottom 1 inch up

4x2

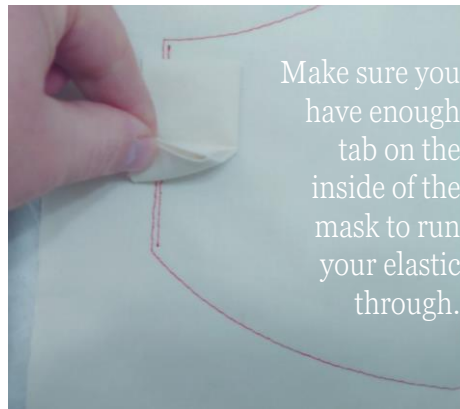

Fold left corner to right corner

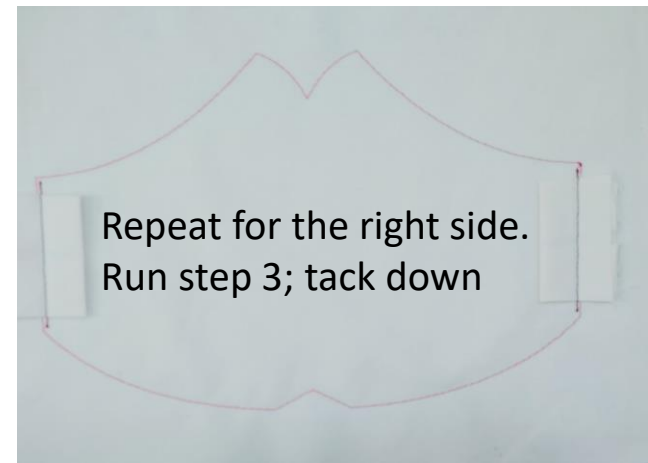

Float outer fabric right side up in embroidery hoop. Run Step 1: tack down **and** placement for tabs

Make sure you have enough tab on the inside of the mask to run your elastic through.

Float tab over left placement stitch. Making sure the CLOSED end of the tab is on the inside of the mask. Run step 2; Tack Down

Repeat for the right side.
Run step 3; tack down

Short on elastic?

Add 2 pieces of ribbons/bias tape over the top and bottom of the placement stitch and skip the tabs! I used 2-18" long pieces on EACH side. Make sure to tape the ties in the middle of the mask and away from the outline before moving to next step.

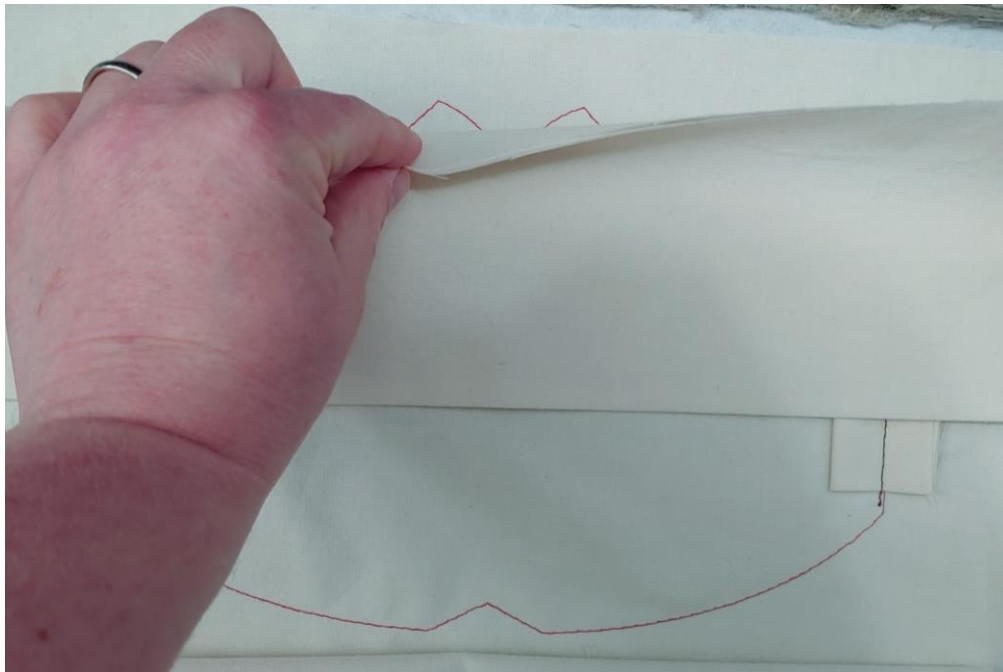

Prefer elastic behind ear?

Instead of tabs, you can also tape elastic pieces at the top and bottom of the placement stitch as pictured. Ours elastic was cut at 7.5 (x2) for children and 9.5" (x2) for adults.

Elastic length will vary based off the stretch of your elastic. It is always best to measure the area you desire the elastic to go around

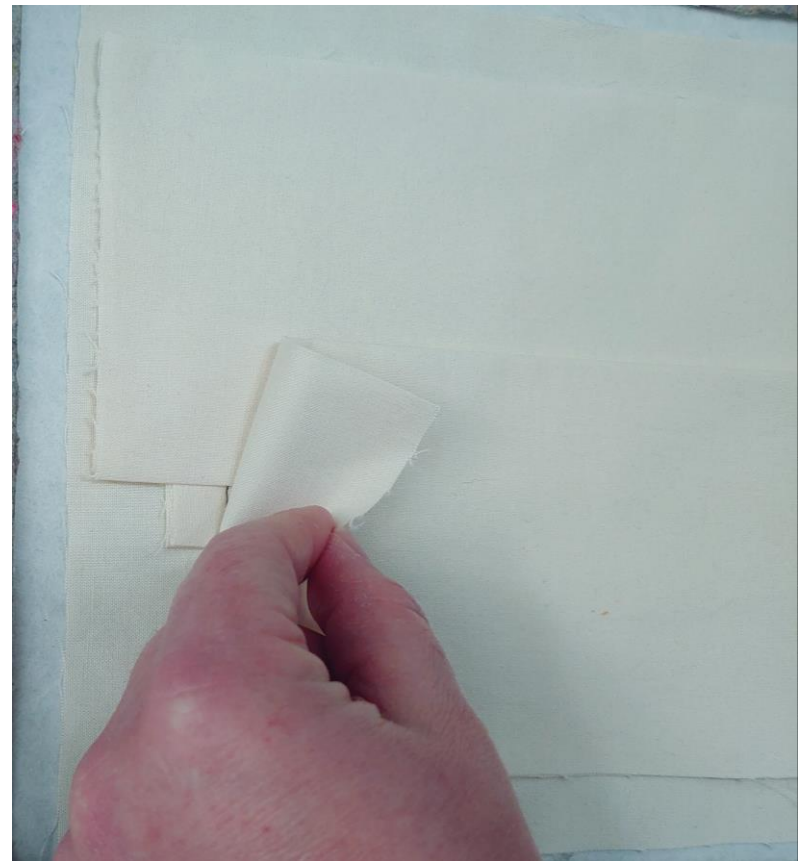

Place one lining over the top of the mask, making sure you are over your step 1 tack down stitches.

The fold of the lining should be on the inside of the mask.

Place your second lining on top of that along the bottom of your mask.

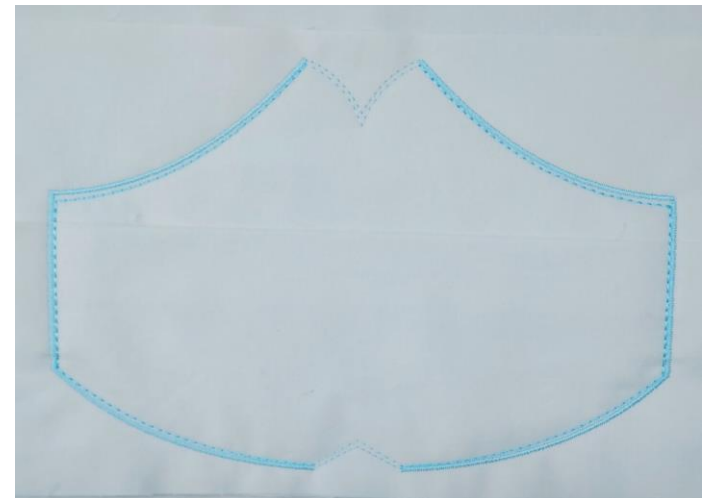

Again, the fold should be on the inside of the mask outline.

We want an overlap of the two lining fabrics by at least 1/2". This will create a pocket for any filters you may wish to use.

Run step 4; final tack down.

This final outline will do a triple stitch first, then go along on the outside of that with a zigzag. This will secure your woven fabrics and prevent unraveling once complete.

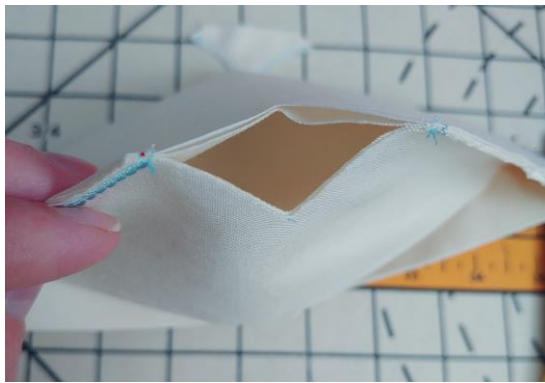

Remove from hoop
Cut around your mask.

The areas where there is single stitch
(*along the top and the bottom*) is a
cutting guide. Cut along those single
stitches, making sure you cut those
single stitches out.

Open the top area you
just cut out

Sew closed

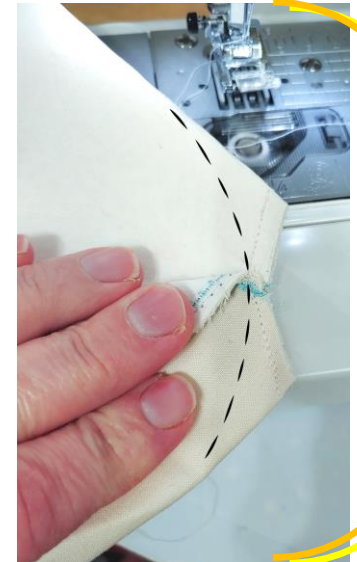

Outer fabric

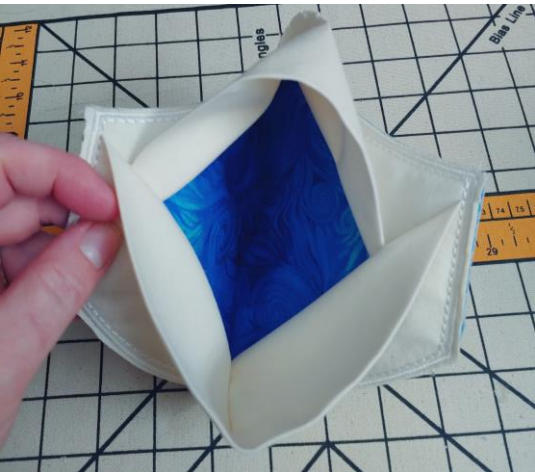

Lining
fabric

Pinch the opening so the
outer fabric is against
itself, and the lining is
against itself.

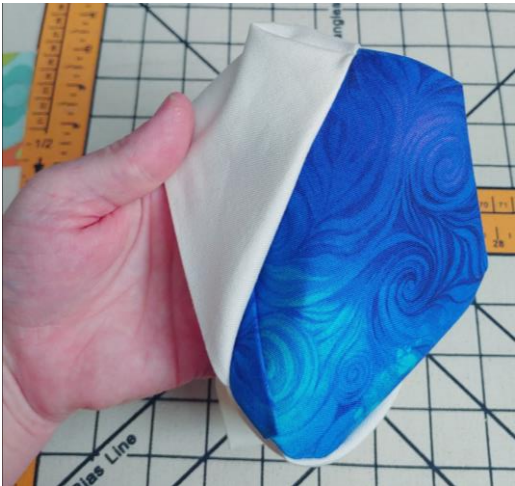

Sewing Tip

For a smoother
rounded nose and
chin area, round up
your sewing path
as pictured. This
will prevent a
pointy nose/chin.

Now you can turn your mask right side out through the lining side opening.

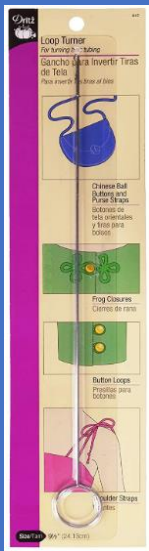

Iron around your mask for a nice crisp edge

Using a safety pin or a tool of your choice; insert your elastic through each tab and sew the elastic ends together!

Short on elastic? Another option is to sew a nice long and skinny fabric tube and use that to tie the mask!

My preferred tool for this project is a Dritz Loop Turner! You can find on Amazon or your favorite craft store.

This FREE design is a Dust Mask. OAD does NOT claim it to prevent any sort of disease or virus.

The design was created during Covid-19 for the owners' husband to use while working in the hospital. Each of her (6) children wanted one too while they played outside, as the pandemic took root during allergy season. So Mom chose to create an In The Hoop Design to help make the masks faster.

Please create and use or gift with the knowledge that it is ***NOT*** a hospital grade mask. You may, however, be able to put an appropriate filter inside the pocket on the back to help some.

You may tweak and explore this mask in any way you wish to change it to suit your family and friends needs.

You may **NOT** tweak and change and call it your own pattern to sell.

You **MAY** sell your FINISHED stitch out designs as you wish
